

REASONS FOR DECISION

FILE NUMBER: 0274761

APPLICANT: Rio Tinto Alcan

BACKGROUND: RTA holds two water lease tenures around their Terminal B dock in Kitimat. A component of a potential LNG Canada Project requires substantial dredging (approximately 1.72million m3) to occur within these two lease areas. This current application is to amend the Management Plan of 0274761 to allow for this dredging project. LNG Canada holds EAO Certification for it's potential project, and this dredging is covered under that Certificate.

DECISION: OFFERED

An offer has been made subject to any terms and conditions that need to be met before tenure is issued.

REASONS FOR DECISION: This lease amendment is consistent with Policy and Legislation, and with an associated EAO Certification.
